

Frequently Asked Questions

Grade Point Average

How do I calculate my GPA?

- Multiply the letter grade points by the number of units in the class.

Grade Points

A = 4

B = 3

C = 2

D = 1

F = 0

For example, if you received an "A" in English 1A, a "C" in Math 52, and an "F" in Guidance 45, you would have:

Class	Grade	Points		Units		Grade Points
English 1A	A	4	X	4	=	16
Math 52	C	2	X	4	=	8
Guid 45F	F	0	X	19	=	0
Total						24

Divide the number of grade points by the number of units attempted, and that gives you your Grade-Point Average. In the above example, the GPA would be 24 divided by 9, which equals 2.66.
